cn() - Every Tailwind Coder Needs It (clsx + twMerge)

```
type ButtonProps = React.ButtonHTMLAttributes<HTMLButtonElement>;

export default function Button({ className, ...props }: ButtonProps) {
  const [pending, setPending] = useState(false);

  return (
    <button
      className={cn("bg-blue-500 py-2 px-4", className, {
        "bg-gray-500": pending,
      })}
      {...props}
    >

```

EOS

```
function useThemeContext() {
  const context = useContext(ThemeContext);
  if (!context) {
    throw new Error(
      "useThemeContext must be used within a ThemeContextProvider"
    );
  }
  return context;
}
```

```
import React, { useState } from "react";

export default function ProductsInStock() {
  const [productsInStock, setProductsInStock] = useState([]);

  return <div>{productsInStock.length ? "Products in stock" : null}</div>;
}
```

```
import { twMerge } from "tailwind-merge";
import { clsx, ClassValue } from "clsx";

export function cn(...inputs: ClassValue[]) {
  twMerge(clsx(inputs));
}
```
